ABHIGNYAN UDGATA

AI & PRODUCT BUILDER — CS UNDERGRAD

Balangir, Odisha, India · abhignyanudgata11@gmail.com · github.com/AbhignyanUdgata · linkedin.com/in/abhignyan-udgata-108ba2289

SUMMARY

Second-year Computer Science student who treats every idea as a reason to start building. Ships AI-native web apps and tools end-to-end — front end, backend, and deployment — and learns by breaking things rather than waiting for a syllabus. Looking for a Summer 2026 internship to build real things alongside people who raise the bar.

PROJECTS

Anon Boards — anonymous social platform

React · Supabase · Vercel

React 18, TypeScript, Vite, Tailwind CSS, shadcn/ui, Supabase (Postgres + Edge Functions/Hono)

- Built and deployed an account-free message board where visitors post and reply instantly, with automatic anonymous IDs and optional accounts to track history.
- Shipped 10+ Supabase Edge Functions as the API layer over Postgres, and a likes-ranked Hot feed with topic boards, sorting, and threaded replies.
- Live at **anonboards12.vercel.app** · rebuilt from prototype across 20+ commits.

Crate — playlist → YouTube converter

HTML · JavaScript · Google OAuth

Vanilla JavaScript, Exportify integration, Google OAuth

- Built a fully client-side tool that turns a Spotify playlist CSV into clickable YouTube search links for every track, removing manual searching.
- Added automatic CSV column detection, bulk-open first 10, copy-all, and .txt export; optional Google sign-in saves playlists across visits.
- Live at **crate-inc.vercel.app** with zero backend for the core flow.

Orca Swarm — decentralized multi-agent reasoning

Python · LangGraph · LLMs

Python, LangGraph, LangChain, Streamlit, Anthropic/OpenAI/Gemini/LM Studio

- Built a five-agent reasoning pod (Scout, Analyst, Verifier, Challenger, Synthesizer) coordinated through an append-only shared signal stream instead of a fixed chain of thought.
- Designed content-driven routing and a convergence gate with an adversarial Challenger; wired four swappable LLM providers with per-role model/temperature overrides.
- Shipped a Streamlit app and CLI over the same compiled graph with a 12-test suite that runs offline against a fake LLM.

EDUCATION

B.Tech, Computer Science & Engineering — VIT-AP University

2025 – 2029 (expected)

CGPA 8.40 / 10

SKILLS

LANGUAGES	JavaScript, TypeScript, Python, Java, HTML, CSS, SQL
FRONTEND	React, Tailwind CSS, shadcn/ui, Vite
BACKEND & DATA	Supabase, PostgreSQL, Edge Functions (Hono), Node.js, MySQL, Oracle DB
AI	LangGraph, LangChain, LLM orchestration, Streamlit
TOOLS	Git, GitHub, Vercel, GitHub Pages, MATLAB

Available for Summer 2026 internships — open to AI/product engineering roles. Email abhignyanudgata11@gmail.com.
